that a
workplace
needs!

CM Mini Port Replikator

ADVANTAGES

- **All-in-one supply**
- **Charging, Internet, screen**
- **Enhances tidiness and aesthetics**
- **For DESK 2, CONI and co**
- **Perfect for desk sharing**

Internet connection, power supply, screen connection – the Mini Port Replicator bundles everything together that a laptop needs and integrates it clearly into one connection panel. This means that the entire desk arrangement can be set up with just one cable and the work surface remains free of cables.

Docking stations, port replicators and similar devices do indeed ensure that only one cable is needed to power the laptop. However, they shift the interfaces to the work surface and take up space. With the Mini Port Replicator, this interface can now be integrated into a DESK 2, POWER FRAME or another connector point. It is connected via USB-C – and the laptop is supplied with electricity, projected onto a screen and connected to the Internet. Further devices can be connected via USB-A. The entire system operates on the Plug&Play principle.
